# 120-foot photovoltaic container for Slovenian mines

## Overview

---

Should solar PV be installed in mining areas?

If future PV projects continue to follow current land-use patterns at the country level under a business-as-usual scenario, then installing solar PV systems on 65,488 km<sup>2</sup> of global mining areas could prevent the occupation of 28,311 km<sup>2</sup> of cropland for solar development.

How can centralized PV generation improve energy structures in mines?

These attributes make them an effective complement to large power grids and a substitute for 'greenfield' energy projects. Viewing such deployments as a specialized form of centralized PV generation can contribute to the optimization of energy structures in mines.

What is a solarfold photovoltaic container?

The Solarfold photovoltaic container can be used anywhere and is characterized by its flexible and lightweight substructure. The semi-automatic electric drive brings the mobile photovoltaic system over a length of almost 130 meters quickly and without effort into operation in a very short time.

How does LZY's photovoltaic power plant work?

LZY's photovoltaic power plant is designed to maximize ease of operation. It not only transports the PV equipment, but can also be deployed on site. It is based on a 10 - 40 foot shipping container. Efficient hydraulics help get the solar panels ready quickly.
