What is a lithium ion battery?

The term “Lithium-ion” battery is a general term. There are many different chemistries for Lithium-Ion batteries including LiCoO₂ (cylindrical cell), LiPo, and LiFePO₄ (cylindrical/prismatic cell). Ionic mostly focuses on designing, manufacturing and marketing LiFePO₄ batteries for its starter and deep cycle batteries.

Can ionic lithium ion batteries be discharged?

Ionic's lithium-ion batteries have 1/3 the internal resistance of a similar capacity lead-acid battery and they can be safely discharged to 90% DOD. Lead-acid internal resistance rises as they are discharged; the actual capacity which can be used may be as little as 20% of the mfg. rating. Discharging in excess will damage the lead-acid battery.
