What are polycrystalline solar panels?

Polycrystalline solar panels are a type of solar panels that have been around for quite some time and are common among many individuals looking to go solar on a budget. They have efficiencies between 15% to 17%.

How do polycrystalline solar panels work?

Polycrystalline panels start as a silicon crystal 'seed' put in a vat of molten silicon. Rather than drawing on the silicon crystal seed upward as is done for monocrystalline cells, the vat of silicon is allowed to cool. It's the cooling that creates distinctive edges and grains within the solar cell.
