## 400v solar water pump

## Overview

---

What is a 500 watt solar water pump?

500 watt solar water pump with external DC controller has stainless steel impeller/screw, maximum head 45~109m (145~355ft), maximum flow 449~1321 gallons per hour, 3 inch/4 inch inlet diameter and 0.75 inch/1.25 inch outlet diameter. 48V DC solar water motor pump can be used for deep well, small fountain, large pond or water tank.

How many gallons can a solar panel pump a day?

Four solar panels can be mounted easily on a single pole, and at low head can still pump 2700 gallons a day, and over 400 gallons at 250 feet. And to give you more flexibility and peace of mind, batteries or a generator can be used to supplement as needed.

How many solar panels are in a rps200 kit?

Take the kit name (RPS 200) and divide by 100 watts for the number of panels in the kit. RPS200 = 2 100w Solar Panels. RPS800V = 8x 100w Solar Panels. Once over 1.5HP Pro Kits, large 300+ watt panels are used. Small and Large panels still have roughly the same total dimensions and surface area per watt.
