# 5g communication green base station installation steps

## Overview

---

How can a 5G base station be truly global?

To develop truly global 5G coverage, base stations will need to be installed across the world in some extremely inhospitable environments. This means that the new generation of base stations needs to be designed with environmental challenges and extreme weather in mind, such as the effects of humidity, heat and wind.

Should a 5G base station be able to withstand a hot climate?

Both the 5G cells and the base station should remain functional even when subjected to severely wet and humid conditions. Even in extremely hot climates, 5G components must remain reliable, stable and energy efficient to prevent downtime, malfunctions and reduction in lifespan.

How will 4G and 5G change the world?

As the world transitions from 4G to 5G, the shift to these new, far more powerful networks will also require a shift in the way base stations are designed and configured.

Why is 5G a global project?

As 5G is a truly global project, companies with a presence all over the globe will also have an advantage, offering seamless supply chains into multiple regions and the manufacturing capacity to ensure that networks can continue to scale as needed without unnecessary delays.
