

# **A telecommunications company that builds base stations**

## Overview

---

What is a base station in telecommunications?

In telecommunications, a base station is a fixed transceiver that serves as the main communication point for one or more wireless mobile client devices. It not only connects wireless devices to each other but also links them to other networks or devices, often through dedicated high-bandwidth wired or fiber optic connections.

What is a mobile base station?

A mobile base station, also called a base transceiver station (BTS), is a fixed radio transceiver in any mobile communication network or wide area network (WAN). The base station connects mobile devices to the network and routes them to other terminals in the network or to the core network of a mobile operator. Read more [Explore Mobile base](#).

Why are base stations important for modern telecommunications?

In summary, base stations are critical for modern telecommunications as they serve as the link between mobile devices and the extensive network infrastructure that spans the globe. The strategic deployment and ongoing improvement of these stations are essential for maintaining global connectivity.

What are base stations used for?

In addition to supporting traditional mobile communication, base stations also play a vital role in two-way radio systems such as citizens band (CB) radio and ham radio. These fixed base stations are commonly used by dispatchers to communicate directly with multiple mobile operators in the field.
