

# **ASEAN BESS Uninterruptible Power Supply**

## Overview

---

Does ASEAN need energy storage?

The ASEAN bloc has set the targets of 23% renewable energy in its Total Primary Energy Supply (TPES) and 35% renewable energy in ASEAN installed power capacity by 2025. This means that energy storage is required. Additionally, without BESS acceptance on a larger level, the needed funds won't materialise, and fewer BESS will be built.

What is Bess & how does it work in ASEAN?

Typical BESS components include battery modules, a storage enclosure with thermal management, a power conversion system (PCS), a battery management system (BMS) and an energy management system (EMS). A few other ASEAN countries are also starting to wake up to the advantages of BESS in their respective energy sectors. But, it's a slow start.

What are battery energy storage systems (Bess)?

Battery energy storage systems (BESS) have emerged as a solution for mitigating the intermittent nature of solar and wind power with the rise of renewable energy. The application of BESS is essential in integrating large-scale renewable energy.

What is a battery energy storage system (Bess) in Singapore?

Singapore's new BESS will help mitigate the solar intermittency caused by changing weather conditions in the region's tropical climate. Because wind and solar resources aren't constantly available and predictable, they're referred to as intermittent energy resources. What Is a Battery Energy Storage System (BESS)?

## ASEAN BESS Uninterruptible Power Supply
