# Base station battery module

## Overview

---

Which battery is best for telecom base station backup power?

Among various battery technologies, Lithium Iron Phosphate (LiFePO4) batteries stand out as the ideal choice for telecom base station backup power due to their high safety, long lifespan, and excellent thermal stability.

What makes a telecom battery pack compatible with a base station?

**Compatibility and Installation Voltage Compatibility:** 48V is the standard voltage for telecom base stations, so the battery pack's output voltage must align with base station equipment requirements. **Modular Design:** A modular structure simplifies installation, maintenance, and scalability.

What is a base module?

The base module is the main component that incorporates two modules and includes Ethernet, USB, COM, and connections for additional displays. It enhances the functionality of the DAS-3 unit.

What is a battery management system (BMS)?

**Battery Management System (BMS)** The Battery Management System (BMS) is the core component of a LiFePO4 battery pack, responsible for monitoring and protecting the battery's operational status. A well-designed BMS should include: **Voltage Monitoring:** Real-time monitoring of each cell's voltage to prevent overcharging or over-discharging.
