# Batteries and inverters for RVs

## Overview

---

Do RV inverters charge batteries?

In most RVs, plugging into an AC power source automatically charges your rig's onboard batteries. These batteries are what supply power to your inverter. In the absence of an AC power connection, your inverter can sometimes drain your battery charge if not turned off when unnecessary.

What is an RV power inverter?

At their core, power inverters are devices that convert DC (Direct Current) from your RV battery into AC (Alternating Current), the standard form of power for most household appliances. Typically, RV batteries operate on 12V or 24V DC, whereas home appliances require 110V or 220V AC, depending on your location.

Which RV power inverter is best?

In the realm of RV power inverters, the Kinverch 1500W stands out as a top choice. We've found it to be an invaluable asset for those seeking reliable power on the go. Its pure sine wave output ensures that your appliances run smoothly and efficiently, a critical feature for any RV enthusiast.

Do I need a power inverter for my RV?

The inverter will convert the DC input of your RV's battery bank to a stable AC output that you'll need to keep the essential appliances and electronics in your RV running. If you find yourself in the position of needing a new power inverter for your RV, you're probably finding a lot of options.
