## Overview

---

What types of battery testing equipment are available?

The Cadex Electronics C700 and C800 battery testing equipment series have various test modes to test and analyze the battery health such as constant current mode (CC), constant voltage mode (CV), constant power mode (CP), DCIR, cycle testing, capacity testing and load simulations.

How do I choose the right battery test equipment?

Selecting the appropriate battery test equipment depends on several factors, including the type of battery being tested, the desired parameters to evaluate, and the specific application. For instance, if you are testing consumer electronics batteries, a battery analyzer might suffice.

What is battery test equipment?

Battery test equipment is essential for evaluating the performance, longevity, and safety of various battery chemistries. Common types of battery test equipment include battery analyzers, cyclers, and impedance meters. Battery analyzers are used to measure capacity, voltage, and internal resistance, ensuring that batteries meet specified standards.

What is a battery test chamber?

Our battery test chambers are designed to test Lithium Ion batteries, lead acid, Battery Managements Systems (BMS), battery packs, modules, battery cells, and more. Our battery test chambers also offer many safety features that conform to IEC, UL and EUCAR testing standards for battery safety.
