# Bern logistics station that can send batteries

## Overview

---

What is the future of battery logistics?

The future is bright for those who keep up with it. It happens to be true in the case of battery logistics too. By 2030, the sales of electric vehicles are expected to cross 27 million units. This means that battery manufacturers like you ought to develop and deliver the most efficient solutions.

What is a lithium battery supply chain?

Lithium batteries comprise almost 70% of the electric vehicle market share. Given the nature of their composition, their supply chain largely revolves around 4 key stages, each requiring unique handling. At Maersk, our people, solutions, and network come together to ensure better cost efficiency, specialisation, and technology.

Where do you transport your batteries?

Usually carried out closer to the automotive assembly location, we help you transport your batteries to international assembly locations and aftermarket suppliers with ease. We ensure that your damaged and used batteries are taken to the recycling/refurbishment centres across Asia, Europe and the US with greater efficiency.

Can lithium-ion batteries be shipped by air?

But there's good news: Lithium-ion batteries can be shipped safely by air if shippers take proper precautions. As with all hazardous goods, safely shipping lithium-ion batteries by air requires having personnel with the appropriate expertise and training and complying with strict labeling and packaging requirements.
