# Can solar energy be installed in tile laying

## Overview

---

Yes, solar panels can be installed on most tile roofs, including clay, concrete, and composite tiles. Can you put solar panels on a tile roof?

In fact, tile roofs and solar panels are a great combination, because a properly installed tile roof can last 100 years. This will outlast your solar panels. That means that you shouldn't have to worry about needing to pay to remove your solar panels to fix a roof issue underneath. But all of this depends on having a good installer to do the work.

Can solar be installed on clay tiled roofs?

Clay tile roofs, which are common in the American southwest, can be a challenge for solar installers. While they have cultural significance and longevity, installing solar panels on them has historically been more expensive and risky than other roof types.

Can a solid Solar Installer install concrete tiles?

For concrete tile roofs, a solar installer can install solar panels. They will temporarily remove just a few tiles, install base plates onto the roof membrane, and attach special hooks to them.

How do I install solar panels on a lightweight tile roof?

The best way to install solar panels on a lightweight tile roof is through a method called inset solar installation, also known as a “comp-out” installation. This technique removes the section of tile where the solar panels will be installed and replaces it with composite shingles before mounting the solar array.
