China portable power station in Hungary

Overview

What type of nuclear power station does Hungary have?

It is the first and only operating nuclear power station in Hungary. In 2019, its four reactors produced more than 50% of Hungary's electricity production. VVER is a Soviet-designed pressurized water reactor type. The number following VVER, in this case 440, represents the power output of the original design.

What percentage of Hungary's energy is solar?

In 2020, solar photovoltaic power made up 5.3 percent of Hungary's energy mix, a figure that jumped to 9.4 percent in 2022. The power plant, which started operating in January 2021, has become one of the largest photovoltaic power stations in the country.

Why is Hungarian project important to China's green energy transformation?

The Hungarian project is the epitome of China's substantial contribution to the green energy transformation in Europe. Europe accounted for more than 50 percent of China's total photovoltaic (PV) exports in 2022, making it China's largest overseas PV market.

What is the significance of China-Hungarian cooperation project?

When discussing the significance of this project, Janos said that through the high-quality operation of this project, it contributed to the economic and trade cooperation between China and Hungary, strengthening the bond between the two nations.
