

# **Cook Islands New Energy solar Panels**

## Overview

---

In May 2015, the Government of New Zealand announced the completion of solar array projects in Rakahanga, Pukapuka, Nassau, Palmerston, and on the northern Cook islands of Penrhyn and Manihiki, where solar photovoltaic panels are expected to provide over 95 per cent of the electricity needs for the villages they connect to and deliver power to more than 230 homes and public buildings. Can solar power save the Cook Islands?

It will construct new solar photovoltaic power plants on up to six islands of Cook Islands' southern group. The project will result in annual savings of 1.09 million liters of diesel consumption and annual reduction of 2,930 tons of carbon dioxide emission, for greater energy security and sustainability in the Cook Islands.

How will the Cook Islands energy project impact the environment?

The project will result in annual savings of 1.09 million liters of diesel consumption and annual reduction of 2,930 tons of carbon dioxide emission, for greater energy security and sustainability in the Cook Islands. The impact of the project will be increased energy security in an environmentally sustainable manner.

What is the future of power in the Cook Islands?

Now with full-time power, the future has taken a new shape for Cook Islands' residents thanks to government renewable energy – leading to an improved quality of life, and increased economy activity. The improved livelihood in the communities that now have the benefit of reliable, 24hour power supply is immeasurable.

How did we help the Cook Islands Government achieve its aim?

We helped the government realise its aim. To support the Cook Islands Government, the New Zealand Government – through the Ministry of Foreign Affairs and Trade, installed mini-grid photo-voltaic power systems in a number of villages on six remote islands. We helped manage this logistically enjoyable

project.

## Cook Islands New Energy solar Panels

---

### Cook Islands - 100% Renewable Energy Atlas

Jan 26, 2019 · The solar projects is expected to save 1.09 million liters of diesel consumption annually, and cut carbon dioxide emissions by 2,930 tons. This project will assist the Cook ...

---

### Cook Islands : Renewable Energy Sector Project

Nov 21, 2014 · It will construct new solar photovoltaic power plants on up to six islands of Cook Islands' southern group. The project will result in annual savings of 1.09 million liters of diesel ...

---

### ENERGY PROFILE Cook Islands

Indicators of renewable resource potential Solar PV: Solar resource potential has been divided into seven classes, each representing a range of annual PV output per unit of capacity ...
