

# **Cylindrical solar container lithium solar container battery capacity classification**

## Overview

---

What is the capacity of a CATL battery?

CATL serves global automotive OEMs. It is the global volume leader among Tier 1 lithium battery suppliers with plant capacity of 77 GWh (year-end 2019 data). Range of MWh: we offer 20, 30 and 40-foot container sizes to provide an energy capacity range of 1.0 – 2.9 MWh per container to meet all levels of energy storage demands.

What is a cylindrical lithium battery?

Cylindrical lithium batteries are divided into different systems of lithium iron phosphate, lithium cobaltate, lithium manganate, cobalt-manganese mixture, and ternary materials. The shell is divided into steel shell and polymer. Batteries with different material systems have different advantages.

- 1.

What is a microgreen containerized energy storage solution?

The core technology used in Microgreen containerized energy storage solutions are top quality Lithium Ferrous Phosphate (LFP) cells from CATL. CATL's 280Ah LiFePO<sub>4</sub> (LFP) cell is the safest and most stable chemistry among all types of lithium ion batteries, while achieving 6,000 charging cycles or more. CATL serves global automotive OEMs.

What are the different types of cylindrical battery cathode materials?

At present, the mainstream commercial cylindrical battery cathode materials mainly include lithium cobalt oxide (LiCoO<sub>2</sub>), lithium manganese oxide (LiMn<sub>2</sub>O<sub>4</sub>), ternary element (NMC), lithium iron phosphate (LiFePO<sub>4</sub>), etc. Batteries with different material systems have different features, compared as follows:

- 5□ Cylindrical battery anode material
