## Overview

---

How many large scale thermal storages have been built in Denmark?

Since the 80ties large scale thermal storages have been developed and tested in the Danish energy system. From 2011 five full scale pit heat water storages and one pilot borehole storage have been built.

What are the dimensions of a large-scale thermal energy storage system?

Dimensions of pilot and research large-scale TES that have been realized within the last 25 years for solar assisted district heating system range from several 100 m<sup>3</sup> up to more than 200,000 m<sup>3</sup>. 2. Borehole thermal energy storages (BTES) in Brædstrup.

What is a large scale thermal storage?

Large scale thermal storages make it possible to utilize these sources, replace peak fossil based production and integrate fluctuating electricity from PV and wind. This makes thermal storages a key element in future Smart Energy Systems, with integration of heating, cooling, electricity, gas and transport systems.

Do energy storage facilities need a grid connection?

Facilities with electric energy storage (including hybrid facilities) must comply with the requirements set in Technical Regulation 3.3.1 issued by Energinet. Green Power Denmark has therefore developed a series of appendices for the grid connection of energy storage facilities to low-, medium-, and high-voltage networks based on TF 3.3.1.
