Danish solar charging pile energy storage application field

Overview

What is Danish Center for energy storage?

Danish Center for Energy Storage, DaCES, is a partnership that covers the entire value chain from research and innovation to industry and export in the field of energy storage and conversion. The ambition of DaCES is to strengthen cooperation, sharing of knowledge and establishment of new partnerships between companies and universities.

How can Denmark develop a new energy technology?

If Denmark shall succeed in the development and implementation of new energy technologies such as energy storage and conversion, a broad knowledge of political and legal frameworks, economic models, the role of civil society as well as new forms of organization and collaboration across sectors and disciplines is necessary.

Can energy piles be used as underground heat exchangers?

This could be attributed to the geometric characteristics of the energy piles, i.e. the large diameter of the energy pile can provide more space for pipe installation compared to the geothermal borehole. Therefore, energy piles have good performance to be served as underground heat exchangers for USES.

Can a full-scale energy pile provide thermal injection performance?

A field test was performed to investigate the thermal injection performance of a full-scale energy pile for USES. A bridge deck embedded with heat exchange tubes was employed for solar energy collection, which can provide thermal energy to the energy pile.
