# Design of energy storage power station in Southern Europe

## Overview

---

What is the energy storage database?

The database includes three different approaches: Energy storage technologies: All existing energy storage technologies with their characteristics. Front of the meter facilities: List of all energy storage facilities in the EU-28, operational or in project, that are connected to the generation and the transmission grid with their characteristics.

What is the energy storage Europe rebranding?

The European Association for Storage of Energy (EASE) today announced a rebranding to better reflect the rapid evolution of the energy storage role in the energy storage system. EASE will now be known as the Energy Storage Europe association, with a new identity designed to give the sector a stronger visibility.

What is energy storage Europe?

EASE will now be known as the Energy Storage Europe association, with a new identity designed to give the sector a stronger visibility. This transformation marks a significant milestone as the association approaches its 15 th anniversary and reflects the central role that energy storage now plays in Europe's energy future.

Why should energy storage technologies be deployed?

An appropriate deployment of energy storage technologies is of primary importance for the transition towards an energy system. For that reason, this database has been created as a complement for the Study on energy storage - contribution to the security of the electricity supply in Europe. The database includes three different approaches:
