[Photo by Guo Shining/For China Daily] China aims to build over 4.5 million 5G base stations next year and give more policy as well as financial support to foster industries that can define the next decade, the country's top industry regulator said on Friday.

What is a 5G base station?

As the world continues its transition into the era of 5G, the demand for faster and more reliable wireless communication is skyrocketing. Central to this transformation are 5G base stations, the backbone of the next-generation network. These base stations are pivotal in delivering the high-speed, low-latency connectivity that 5G promises.

Are 5G base station chips compatible with 4G & 6G networks?

5G base station chips must be compatible with 4G, 5G, and future 6G networks, supporting multi-band and technology standard switching to ensure seamless connection between generations of networks.

Why are 5G base station chips important?

As 5G technology matures and manufacturing processes are optimized, the cost of base station chips will gradually decrease, thereby promoting the wider deployment of 5G networks. 5G base station chips play a critical role in the construction of 5G networks.
