## Overview

---

What is a dual glass PV module?

The dual glass PV module is a kind of special glass that can be used to generate electricity by solar radiation. It is composed of low-iron glass, solar cells, film, back glass, and special metal wires. It seals the solar cell through a film between a piece of low-iron glass and a back glass, which is the most innovative high-tech for construction.

Why is double glass important for solar panels?

Double Glass is especially important in photovoltaic facilities such as solar power plants and with the expected long service life of modules such as AKCOME, Jinery or Jollywood. Why solar panels with glass-glassTechnology?

Why is solar double glass more durable?

.

What is a glass-glass solar panel?

Glass-glass module structures (Glass Glass or Double Glass) is a technology that uses a glass layer on the back of the modules instead of the traditional polymer backsheet. Originally double-glass solar panels were heavy and expensive, allowing the lighter polymer backing panels to gain most of the market share. Thanks to producers such as:

What are the benefits of double glazed solar panels?

Double-glazed modules are characterized by increased reliability, especially for large-scale photovoltaic projects. They include better resistance to higher temperatures, humidity and UV conditions, and have better mechanical stability, reducing the risk of microcracks during installation and operation.
