

# **Earthwork for wind and solar complementary solar container communication stations**

## Overview

---

Can a multi-energy complementary power generation system integrate wind and solar energy?

Simulation results validated using real-world data from the southwest region of China. Future research will focus on stochastic modeling and incorporating energy storage systems. This paper proposes constructing a multi-energy complementary power generation system integrating hydropower, wind, and solar energy.

What is a wind-solar-hydro-thermal-storage multi-source complementary power system?

Figure 1 shows the structure of a wind-solar-hydro-thermal-storage multi-source complementary power system, which is composed of conventional units (thermal power units, hydropower units, etc.), new energy units (photovoltaic power plants, wind farms, etc.), energy storage systems, and loads.

When was the first wind-solar complementary power generation system launched in China?

The successful grid connection of a 54-MW/100-kWp wind-solar complementary power plant in Nanâ€™ao, Guangdong Province, in 2004 was the first windâ€™solar complementary power generation system officially launched for commercialization in China.

What is hydro wind & solar complementary energy system development?

Hydroâ€™windâ€™solar complementary energy system development, as an important means of power supply-side reform, will further promote the development of renewable energy and the construction of a clean, low-carbon, safe, and efficient modern energy system.
