## Overview

---

What are industrial uninterruptible power supply systems (UPS systems)?

We cater to multiple sectors for industrial uninterruptible power supply systems (UPS Systems) through standard or customized solutions. From high amperage manufacturing processes to miniscule backup requirements, these systems can offer efficiency in every application.

Why do you need an uninterruptible power supply system?

Uninterruptible power supply systems can reduce downtime (and its cost) in manufacturing by providing reliable backup power in an emergency. A UPS allows your systems to shut down slowly, in alignment with standard procedures, as opposed to the rapid shutoff of an outage, which could damage the equipment.

What is a Mitsubishi Electric uninterruptible power supply (UPS) system?

Mitsubishi Electric uninterruptible power supply (UPS) systems provide daily power conditioning as well as backup power in the event of an outage to reduce damage to manufacturing equipment and maintain uptime for your production line.

Why should a manufacturing facility use an ups?

A UPS is able to match the higher power requirements of a manufacturing facility to ensure you have constant protection even during peak usage points in your cycle. It can handle the elevated power required for motors, robotics, drives – everything you need to keep your production line running while protecting critical equipment from surges.
