Can a multi-stack fuel cell hybrid system improve fuel cell durability?

To improve the fuel cell durability of the hydrogen Electric Multiple Units, this paper proposes a novel multi-stack fuel cell hybrid system energy management strategy in consideration of fuel cell degradation.

What is a two-level energy management strategy for fuel cell-battery-UC hybrid system?

In this paper, a two-level energy management strategy is proposed for the fuel cell-battery-UC hybrid system. In the proposed two-level energy management strategy, the load power is distributed between the fuel cell system and the battery-UC hybrid system using the ECMS to minimize the total hydrogen consumption at the first level.

Why is energy storage a buffer for fuel cell system?

Due to the slow response time of the fuel cell system, fast changing load demand would lead to fuel starvation phenomenon, which will shorten its lifespan. One of common solutions is to use an energy storage system (ESS) as a buffer to isolate the fuel cell system from the dynamic load demand.
