Overview

What is a 3s energy storage system?

In the world of Energy Storage, the "3S System" refers to the three core components: the Battery Management System (BMS), the Energy Management System (EMS), and the Power Conversion System (PCS). These three systems work in perfect synergy to ensure the safety, stability, and efficiency of energy storage operations.

What is a 30kW photovoltaic storage integrated machine?

Among them, the 30KW photovoltaic storage integrated machine has a DC voltage of 200~850V, supports MPPT, STS, PCS functions, supports diesel generator access, supports wind power, photovoltaic, and diesel power generation access, and is comparable to Deye Machinery. The Energy Management System (EMS) is the "brain" of the energy storage cabinet.

What is EMS & how does it affect a microgrid?

EMS structure encompasses device layers interfacing with PCS and BMS, communication layers for data transmission, information layers for storage, and application layers for control. Unlike BMS, which focuses on battery-level protection, EMS influences the broader microgrid, issuing commands to subordinate systems.

What is a mobile energy storage system?

On the construction site, there is no grid power, and the mobile energy storage is used for power supply. During a power outage, stored electricity can be used to continue operations without interruptions. Maximum safety utilizing the safe type of LFP battery (LiFePO₄) combined with an intelligent 3-level battery management system (BMS);
