Can PGIS-Solargis be used to estimate solar energy yield in Somalia?

The PVGIS-Solargis database can be used to estimate PV energy yield for various locations in Somalia, demonstrating the potential of solar energy in the region. Fig. 12. The estimated monthly electricity generation and recorded PV generation in the Bacadweyne site. 8. Discussion of key findings.

Can solar energy be used in Somalia?

In a real case study, a solar photovoltaic system in Somalia achieved a performance ratio of 70.8%. Recommendations have been provided to increase the utilization of solar energy in Somalia. Based on the extensive review conducted by the authors, no previous study has been performed on the solar energy potential in Somalia.

Why is solar energy scarce in Somalia?

. The energy demand in society is increasing at a credible speed. Li Samatar et al. (2023) come with findings that due to unfamiliarity, lack of energy awareness, high initial costs, and lack of infrastructure, the utilization of solar energy is limited in Somalia.

How is solar power reshaping the education sector?

Solar power is reshaping the education sector by providing affordable, sustainable, and reliable energy solutions. From classrooms and computer labs to internet access and smart energy management, the benefits are vast. Schools that embrace solar energy not only save costs but also contribute to a greener planet.
