# High-voltage mobile energy storage container for chemical plants in the UAE

## Overview

---

What is a high-voltage energy storage system?

A high-voltage energy storage system (ESS) offers a short-term alternative to grid power, enabling consumers to avoid expensive peak power charges or supplement inadequate grid power during high-demand periods. These systems address the increasing gap between energy availability and demand due to the expansion of wind and solar energy generation.

What is a mobile energy storage system?

On the construction site, there is no grid power, and the mobile energy storage is used for power supply. During a power outage, stored electricity can be used to continue operations without interruptions. Maximum safety utilizing the safe type of LFP battery (LiFePO4) combined with an intelligent 3-level battery management system (BMS);.

What are CATL battery-powered energy storage systems?

CATL battery-powered energy storage systems provide energy storage and flexibility in power generation. Instant utilization and energy output due to battery electrochemical technology and the technology of electricity production using gas-piston units can be combined into a single most efficient system.
