# How big an inverter should I use for 60w

## Overview

---

Do I need an inverter size chart?

The need for an inverter size chart first became apparent when researching our DIY solar generator build. Solar generators range in size from small generators for short camping trips to large off-grid power systems for a boat or house. Consequently, inverter sizes vary greatly.

What size solar inverter do I Need?

Your inverter size should match your solar array's capacity, not your electricity bill. This means your inverter doesn't need to power your entire home—it just converts whatever your panels generate. Let's say you have a 6kW solar array (twenty 300-watt panels).

How do I size my inverter?

Ready to size your inverter?

Follow this proven process: Calculate your total panel capacity Count your panels and multiply by their wattage rating. Example: 20 panels  $\times$  400 watts = 8,000 watts (8kW) Apply the DC-to-AC ratio Divide your array capacity by your target ratio.

How many Watts Does a solar inverter use?

Depending on where they fall in that band and the size of their solar array, they will likely use a 3, 5, or 10kW inverter. You also need to consider surge watts and voltage drop. Surge watts are the extra power required to start appliances that have motors, such as refrigerators and air conditioners.
