How big an uninterruptible power supply should a household use

Overview

What is an uninterruptible power supply (UPS)?

An uninterruptible power supply (UPS) is one of the best ways to protect sensitive electronics like desktop computers from irretrievable data loss and permanent damage. But what about everything else in your house that plugs into the wall?

Read on to learn about the benefits of uninterrupted power for your home.
What Is a UPS?

Is your uninterruptible power supply oversized?

Not all equipment needs to be supported, so reviewing all your equipment and breaking it down into a list of either critical load or non-critical load can help make sure your final uninterruptible power supply size requirement is not drastically oversized.

Do you need an uninterruptible power supply?

But precision electronics like computers, gaming consoles, Smart TVs, and external hard drives are at far greater risk of damage from power interruptions than many home appliances. An uninterruptible power supply (UPS) is one of the best ways to protect sensitive electronics like desktop computers from irretrievable data loss and permanent damage.

How does an uninterrupted power supply work?

An uninterrupted power supply works by constantly monitoring output from the alternating current (AC) outlet the UPS is plugged into and automatically switching to direct current (DC) electricity from an onboard backup battery during interruptions such as voltage drops and blackouts.
