## Overview

How long can a 24V inverter run?

Regardless of the size, the calculation steps are always the same. Using this calculation, a 24V inverter with a 100ah battery and 93% efficiency can run a 500W load for 2.3 hours. You have a 24V inverter with a 150ah deep cycle battery. The inverter is 93% efficient. You want to run a 700 watt load, so how long can the inverter run this?

How long will a 50A battery run through an inverter?

Let's say you have: Running load through an inverter?

Yes (inverter efficiency - 90%) Now let's put this info into our 2nd formula.  
$$(50\text{ah} \times 12\text{v} \times 85\% \times 50\% \times 100\% \times 90\%) \div 120 \text{ watt} = 229.5 \div 120 \text{ watt} = 1.9 \text{ hours}$$
 Turns out, in actuality a 50ah battery will run a 10A load for about 1.9 hours.

How long do inverters last?

Under normal use and maintenance conditions, the service life of an inverter is usually between 5~15 years. Household inverters: If the operating environment is good and the loads are properly matched, they can usually reach 10~15 years of service life.

Can an inverter run 24/7 without a problem?

Most inverters can run 24/7 without a problem. If you run your appliances from it, you should not turn the system off. Otherwise you will have to reload everything when you turn the inverter on again. The only time you should shut off the system is if you will not be using it for long periods (for example, you will go on vacation).
