# How long does a solar container lithium battery pack last

## Overview

### How long do solar batteries last?

The life expectancy of a solar battery depends on several factors—what kind of battery you have, how you use it, where it's stored, and how well it's maintained. While lead-acid batteries may only last a few years, lithium options can easily reach 10 to 15 years or more with proper care.

### How long do solar panels last?

In fact, with solar panels increasingly lasting for 30 or even 40 years, you may end up buying more than one replacement battery. Maintaining and monitoring your battery is the most important action you can take for your battery, since it's the only way you can quickly discover when and if there's a problem, and get the issue fixed straight away.

### How long does a battery last?

Lead-acid batteries (flooded or sealed): These are the most traditional type and also the shortest-lived, typically lasting 3 to 7 years. They're more affordable upfront but require regular maintenance and don't hold up as well over time. When people talk about battery lifespan, they're often referring to "cycle life."

### How long does a lithium battery last?

For example, a lithium battery might be rated for 5,000 cycles. If you cycle it once a day, that gives you roughly 13-14 years of use. But if you're only cycling it every few days, you could stretch that out even further. The depth of each cycle also matters.
