# How long does the base station solar container battery need to last

## Overview

---

### How long do solar batteries last?

The life expectancy of a solar battery depends on several factors—what kind of battery you have, how you use it, where it's stored, and how well it's maintained. While lead-acid batteries may only last a few years, lithium options can easily reach 10 to 15 years or more with proper care.

### How long do solar panels last?

In fact, with solar panels increasingly lasting for 30 or even 40 years, you may end up buying more than one replacement battery. Maintaining and monitoring your battery is the most important action you can take for your battery, since it's the only way you can quickly discover when and if there's a problem, and get the issue fixed straight away.

### How long does a battery last?

Lead-acid batteries (flooded or sealed): These are the most traditional type and also the shortest-lived, typically lasting 3 to 7 years. They're more affordable upfront but require regular maintenance and don't hold up as well over time. When people talk about battery lifespan, they're often referring to "cycle life."

### When do solar batteries need to be replaced?

Solar batteries usually need to be replaced after 10 to 12 years. This is usually the point when they reach their recommended cycle limit, though this will vary depending on your usage and the maximum number of cycles they can endure.
