How much does a solar inverter cost?

The inverter is a crucial part of your solar investment, whether you're on the grid or building an off-grid solar system. It connects your solar photovoltaic panels to your home and the grid, determining whether your energy is usable, storable, or wasted. Expect to pay \$1,000 to \$3,500, depending on type, size, and features.

Which solar inverter is best?

String inverters are the most affordable. Hybrid inverters cost more because they handle more functionality. Microinverters, one for each panel, have the highest cost per watt due to their quantity. 2. System Size Larger solar panel systems require higher-capacity inverters.

What factors affect solar inverter costs?

Factors that affect solar inverter costs include: System size – Your inverter's input-wattage rating should be close to your solar panel system's output rating. U.S. residential solar panel systems typically fall in the 5 kilowatt range. Efficiency – The industry standard for peak efficiency is 97%.

How do I choose a solar inverter?

Stick with a string inverter. Lower overall cost, fewer moving parts. Match the inverter to the system size, don't overspend. Choose one with at least a 10-year warranty. Ask your solar installer to quote two or three options. If you might expand your system, size the inverter accordingly.
