

# **How often should the UPS battery be replaced**

## Overview

---

UPS batteries should generally be replaced every 3 to 5 years. This ensures your devices stay powered during outages. It's important to monitor the battery's performance regularly. When should I replace my ups battery?

It's important to note that it is quite risky to wait for a sign of impending failure before opting to replace your UPS batteries. When the UPS sounds a low battery alarm or displays another sign of battery illness, you may not have ample time to schedule a service call and obtain the necessary replacement batteries before the battery dies.

How long do UPS batteries last?

Battery life can also be significantly reduced if an organization doesn't engage in regular service and maintenance, which are essential to ensuring ongoing UPS reliability. So how often do you replace UPS batteries?

As a general rule, large UPS units tend to run for 15 or 20 years, while smaller models usually last 10 or more.

How long does an uninterruptible power supply last?

Like all other IT equipment, an uninterruptible power supply (UPS) has a finite lifespan. The average expected lifecycle of a UPS is eight-to-ten years. The batteries typically need to be replaced at least three times during that lifespan. Of course, once a UPS reaches the end of its lifespan, it should be replaced to mitigate downtime.

How long do ups last?

One is the life of the unit itself - up to ten years. The second consideration is batteries. Every UPS unit has a battery, which as mentioned, must be replaced up to three times. Newer models, however, carry lithium-ion batteries that last as long as the UPSs themselves. This translates to less maintenance.

## How often should the UPS battery be replaced

---

When is it time to replace the batteries in the UPS

Battery health is critical to UPS function. These videos outline when batteries should be replaced, and how to replace the batteries in the Minuteman Enspire, Entrust, and PRO-LCD Series ...
