# Huawei Vanadium Liquid Flow Battery Energy Storage Industry

## Overview

---

What is a giant solar-plus-vanadium redox flow battery project in Xinjiang?

A giant solar-plus-vanadium flow battery project in Xinjiang has completed construction, marking a milestone in China's pursuit of long-duration, utility-scale energy storage. China has completed the main construction works on the world's largest vanadium redox flow battery (VRFB) energy storage project.

When were vanadium flow batteries invented?

In the 1980s, the University of New South Wales in Australia started to develop vanadium flow batteries (VFBs). Soon after, Zn-based RFBs were widely reported to be in use due to the high adaptability of Zn-metal anodes to aqueous systems, with Zn/Br<sub>2</sub> systems being among the first to be reported.

Why is a flow battery important to China's Energy Future?

It also plays an important role in regulating energy supply and frequency, making it a key component of China's sustainable energy future. Rongke Power, a pioneer in flow battery technology, previously developed the 100 MW/400 MWh Dalian system in 2022, the largest of its kind at the time.

How long do flow batteries last?

**Valuation of Long-Duration Storage:** Flow batteries are ideally suited for longer duration (8+ hours) applications; however, existing wholesale electricity market rules assign minimal incremental value to longer durations.
