## Overview

---

What is battery storage EV Charing integrated system?

Battery storage EV charing integrated system is designed to deliver high charging power with lower grid dependency, making it ideal for applications where power availability is restricted or where energy costs fluctuate. Its sleek, compact form makes it a perfect fit for both commercial & industrial fleet.

What is SCU EV charging system?

SCU provides German customers with an integrated solar energy storage EV charging system, which can reduce the pressure on the power grid and help users save energy costs significantly. The intelligent management system can monitor and optimize energy use in real-time to ensure the efficient operation of the entire system.

How does the EV charging system work?

The entire system is controlled by EMS, which performs global intelligent control of PV, grid, energy storage, and EV chargers through EMS to ensure that the system automatically switches operating modes under different circumstances and automatically adjusts the EV charging power according to the battery SOC.

How does SCU EV charging stack work?

SCU designed a 40ft energy storage container + 240KW EV charging stack solution for them. Half of the container space is an accessory storage area, and the other half is a customer rest area. This system forms a microgrid of PV, BESS and EV chargers, which can realize two operation modes of grid-connected and off-grid according to the demand.
