

Introduction and prices of solar module manufacturers

Overview

Why do solar modules cost so much?

However, as the primary cost component of photovoltaic modules, the price of solar cells plays a decisive role in module pricing. Due to the oversupply of polysilicon in earlier periods, prices have been under sustained pressure since 2023, even falling below cost levels in the first half of 2024.

How did our solar PV module manufacturing plant's financial model work?

Our solar PV module manufacturing plant's financial model was meticulously modelled to satisfy the client's requirements. It provided a thorough analysis of production costs including capital expenditures, manufacturing processes, raw materials, and operating costs.

How are photovoltaic module price adjustments affecting industry players?

The current round of photovoltaic module price adjustments has imposed significant operational pressure on industry players. Leading companies, with their high R&D costs, are at a disadvantage in the price competition. Meanwhile, small and medium-sized enterprises find it challenging to endure prolonged price wars.

What is the global solar PV module market size?

According to an IMARC study, the global solar PV module market size reached 1,386.1 TWh in 2024. Looking ahead, the market is expected to grow at a CAGR of approximately 14.36% from 2025 to 2033, reaching a projected capacity of 4,919.2 TWh by 2033. A number of important factors are driving the market for solar PV modules.
