## Overview

What is a hybrid inverter?

A hybrid inverter is an all-in-one inverter that incorporates both a solar and battery inverter in one simple unit. This enables storage of excess solar energy in a battery system for self-use. Hybrid inverters function like a common grid-tie solar inverter but can generally operate in one of several different modes, depending on the application.

Can a hybrid inverter work without a battery?

Most hybrid inverters can operate without a battery and function like a grid-tie solar inverter by exporting excess solar energy to the electricity grid. Solar energy systems without batteries send excess power to the grid. When you add a battery, you want to store that excess energy for later use, during nighttime or power outages.

Does a solar inverter need a battery?

Solar energy systems without batteries send excess power to the grid. When you add a battery, you want to store that excess energy for later use, during nighttime or power outages. But not all inverters can manage both solar power generation and battery charging/discharging.

How do I select a hybrid inverter?

When choosing a hybrid inverter, it's important to consider its capabilities and how they can be customized to suit your needs and preferences. To help you make an informed decision, consider consulting with an accredited solar and battery specialist like Jason Svarc, who has over a decade of experience in designing and installing solar and battery systems.
