## Overview

---

What is a 3 phase inverter system?

A three-phase inverter system is operating at an output power level ranging from 10kW to above 300kW, used in commercial and decentralized utility-scale applications. High output power can be realized through stacking multiple medium-power blocks.

What is a three-phase string inverter system?

Three-phase string inverter systems convert the DC power generated by the photovoltaic (PV) panel arrays into the AC power fed into a 380 V or higher three-phase grid connection.

Why are three phase inverters better than single phase?

Because of their balanced load and reduced current per phase, three phase inverters operate more efficiently than their single-phase counterparts. They lose less energy as heat and deliver better performance over long distances. Three phase systems are more scalable.

What is a single phase inverter?

A single phase inverter changes DC to AC power with one output line, usually giving 220V or 230V. It has three connections: This type is common for home use. A three phase inverter gives 380V or 400V using three power lines. It creates stronger and more stable power, often used for large appliances or in factories.
