How many solar panels do you need to power a house?

The goal for any solar project should be 100% electricity offset and maximum savings — not necessarily to cram as many panels on a roof as possible. So, the number of panels you need to power a house varies based on three main factors: In this article, we'll show you how to manually calculate how many panels you'll need to power your home.

How many kW solar panels do I Need?

As we calculated earlier, the California household needs a 7.2 kW system to cover its electricity needs. A comparable household in Massachusetts needs a 9.9 kW system. So, in less sunny areas like Massachusetts, you might consider choosing highly efficient solar panels to maximize your energy output per square foot.

How many kilowatts is a 5 kW solar system?

System capacity: solar arrays are usually sized in kilowatts (kW). A 5 kW system has panels totaling around 5,000 W. To estimate required panel count, you need to understand your home's daily electricity consumption.

How much energy does a solar panel use a day?

The average U.S. household uses about 30 kWh per day, but this varies—smaller homes might use 15-20 kWh, while larger homes with electric heating or EVs could use 40-60 kWh daily. The next step is to estimate how much energy a solar panel will produce where you live.
