How long does a solar inverter last?

No battery storage system, pure sine wave AC output, wide input voltage can be set according to customers' requirement. Powerful protection functions make its service life up to 15-20 years or more. These solar inverters provide a reliable source of power in areas without access to the grid or as a backup power supply.

Which solar inverter is right for You?

Whether you're aiming for self-consumption, backup power, or selling surplus energy to the grid, the Deye Hybrid On-Off Grid SG01HP3 is the ideal choice. Rely on Deye's advanced technology and dependable performance to unlock the full potential of solar energy with the SG01HP3 hybrid inverter available at Solaris Dbayeh.

What is a sg01hp3 solar inverter?

With its impressive 50KW power rating and high voltage (HV) capability, this hybrid inverter ensures optimal conversion of solar energy for your solar power system. Equipped with 4 maximum power point trackers (4MPPT), the SG01HP3 optimizes energy harvesting from your solar panels, enhancing system performance in diverse weather conditions.

How much space does a solar inverter need?

A minimum of 50cm of space is required around the inverter that enters and exits the wind. The solar inverter that enters and exits the wind from the left and right is the air entering from the side, and the space distance of more than 100cm is left on both sides. The PV solar inverter must be placed in a space where the air is circulated.
