Overview

What is intelligent uninterruptible power supply (IUPS)?

The project was meant to Design and Construct an Intelligent Uninterruptible Power Supply (IUPS) to provide an uninterruptible (continuous, steady, non-stop) and clean (qualitative) source of power supply of 500VA, 220V, 50Hz for domestic equipment it supplies and protects.

What is an uninterruptible power supply (UPS)?

airairjournals@gmail.com; enquiry@airjournal.org An uninterruptible power supply (UPS) is a voltage storage device that allows an electrical or electronic appliance to maintain functionality while connected to the source of electricity for a reasonable period of time when the primary source ceases to provide power. There are different types of UPS.

What is a microcontroller based intelligent uninterrupted power supply (UPS) system?

Working model of microcontroller based intelligent Uninterrupted Power Supply (UPS) system for power management in laboratory is worked upon. The appliances of lab viz. computers, fans, lights are automatically controlled during power failure according to their priority to ensure optimal utilization of UPS power.

How to get uninterrupted power supply?

To get uninterrupted supply nowadays power backups such as inverters and UPS are used commonly. If it is a traditional UPS it is difficult to know remaining power and time till it can supply energy in terms of power. In order to overcome this issue, a design is proposed in the following paper.
