## Overview

---

What is battery management system (BMS)?

Battery Management System (BMS) is the “intelligent manager” of modern battery packs, widely used in fields such as electric vehicles, energy storage stations, and consumer electronics.

What is a BMS control unit?

The control unit processes data collected from the battery and ensures that the system operates within its safe operating area. A critical part of the BMS, this system uses air cooling or liquid cooling to maintain the temperature of the battery cells.

What is a battery management system?

A battery management system is a vital component in ensuring the safety, performance, and longevity of modern battery packs. By monitoring key parameters such as cell voltage, battery temperature, and state of charge, the BMS protects against overcharging, over discharging, and other potentially damaging conditions.

What is a BMS used for?

A Battery Management System (BMS) is widely used in various applications such as electric vehicles (EVs), energy storage systems (ESS), uninterruptible power supplies (UPS), and industrial battery applications.
