

Mobile Energy Storage Container DC for German Highways

Overview

Can a mobile energy container be used to charge electric vehicles?

An innovative system for sustainable energy generation is currently in use at Munich Airport: a container with photovoltaic panels and wind rotors from FlowGen, a company specializing in green energy system solutions. In cooperation with Munich Airport, the mobile energy container is being used to charge electric vehicles.

Can a mobile energy storage system replace centered power scheduling?

In this paper, an enhanced coordinated energy scheduling scheme is proposed for typical highway demand scenarios, based on the introduction of mobile energy storage system, to replace the traditional centered power scheduling.

Where is the energy container located?

The energy container is located in a parking lot used by car rental companies on the east side of the airport. There, newly delivered rental cars will be charged using energy generated by three small wind turbines and photovoltaic panels.

What is mobile energy storage?

Mobile energy storage provides a clean alternative to diesel generators for locations with no grid connection or only a weak one. Grid congestion creates increasingly long waiting times for companies who want to increase their grid connection. Mobile energy storage is the temporary solution to keep your business running.
