

Monaco Glass solar Module Glass

Overview

What is the difference between glass and plastic solar modules?

Glass/Glass modules withstand air and moisture and offer best cell protection, while plastic backsheets of glass/foil modules become porous. The Glass/Glass composite protects solar cells against micro cracks and thus ensures long-term operating life of 40 years and more.

What is a glass glass solar module?

Glass glass solar module is a long lasting and ultra resistant to any weather conditions Building Integrated Photovoltaics solution. BIPV solar panels can be used as an additional power source and alternative material in architecture to achieve future design for a comparable to standard materials price.

How to install glass-glass solar modules?

Glass-glass solar modules can be installed both with or without frames. The mounting systems FAST, MATCH, LEVEL, NICER, LOCKUP, LOCKIN, LAYUP and LAYIN are especially suitable for the integration of glass-glass solar modules. Particularly anti-glare surface structures are used. Megasol Cell technologies: Mono HiR / Mono HiR RearCon.

What are the applications of glass-glass solar panels?

Applications include facades, railings, in-roof and on-roof applications, infrastructure structures (for example, dams, noise barriers, etc.), open spaces, carports, alpine and desert applications. Glass-glass solar modules can be installed both with or without frames.
