Overview

Do I need a dedicated bidirectional charging unit?

For V2H and V2G bidirectional charging, a dedicated bidirectional charging unit is needed. The charger is designed to convert the DC power from the EV battery back to AC power, which can be used to power a home or send electricity back to the grid.

What is the world's slimmest bi-directional DC charger?

The Highbury, touted as the world's slimmest bi-directional DC charger, will be available in two sizes, the standard 7kW and a high power 11kW (46A). Initially, it will enable EV owners to sell excess power to the grid via V2G, but additional functionality, including vehicle-to-home (V2H), will be available later.

What is a containerized charging capsule?

The containerized charging capsule allows customers to utilize semi-permanent, portable charging to account for unpredictable changes in operations, offering fleet operators the ability to charge electric vehicles from any location.

Are there any universal bidirectional home chargers?

As of writing, there are only three commercially available universal bidirectional home chargers in the market: the Wallbox Quasar, Highbury, and Fermata FE-15. Upcoming releases include the Enphase Bidirectional EV Charger, Autel MaxiCharger V2X, and the SolarEdge bidirectional EV charger.
