

# One of the solar container lithium battery packs has a large capacity

## Overview

---

What is the containerized lithium battery energy storage system?

The containerized lithium battery energy storage system is based on a 40-foot standard container, and the lithium iron phosphate battery system, PCS, BMS, EMS, air conditioning system, fire protection system, power distribution system, etc. are gathered in a special box to achieve high integration.

Could a containerised battery energy storage system improve energy density?

Chinese battery giant CATL, supplier to some of Australia's biggest grid-scale project developers, has unveiled a new containerised battery energy storage system promising a one-third increase in energy density, a 20% reduction in overall footprint and a longer service life.

How does a lithium battery energy storage system work?

When the power grid is out of power, the lithium battery energy storage system can act as an independent inverter power supply to provide AC power to important loads, thereby ensuring the needs of users. In areas with high electricity costs, it is also possible to build a large energy storage system solely to sell electricity.

How much energy does a 20 ft container system use?

The Chinese manufacturer said its next-gen 20-foot container system packs 40% more energy and has a 40% smaller footprint compared to a standard 5 MWh system. The new product is based on 587Ah battery cells, with an energy density of more than 430 Wh/L. The capacity of a single battery cell stands at 1.87 kWh.
