

# Plastic glass solar

## Overview

---

Are plastic solar panels better than glass?

The installation process for solar panels can be time-consuming and different types of installs may require plastic or glass solar panels. Plastic panels may be a better option for first-time installers, especially on a steep roof, due to their lightness and overall maneuverability.

What type of plastic is used for solar panels?

Acrylonitrile Butadiene Styrene (ABS): A sturdy plastic used for solar panel braces and attachments. Ex: Attaching a solar panel to your RV.

Acrylic/Plexiglass: Used for protective and insulating films to make panels more durable and reduce internal humidity. Polycarbonate: Used as a glazing to protect glass and other fragile elements from impact.

What are the benefits of using plastic in solar panels?

Three manufacturers are making a move away from the standard aluminum and glass solar panel in a bid to lower weight, emissions, and cost. They are swapping out aluminum and glass in favor of plastic to save weight and add flexibility.

Are glass solar panels a good choice?

However, if you want to use solar panels for an extensive period, consider glass for its longevity and overall cost-saving energy. The material used in solar panels directly affects energy production. Glass solar panels are more energy-efficient when generating and distributing electricity.
