They are equipped with state-of-the-art equipment and advanced control, protection, and communication systems that enable local and remote monitoring and control.

What is a portable substation?

Portable substations are composed of a transformer unit, an insulating oil cooler, a control panel, a circuit breaker, and 6.6kV electricity distribution equipment, which are all loaded on a trailer. The trailer serves as a substation, stepping down the line voltage from 66kV to 6.6kV.
