# Portable power supply for communication products

## Overview

---

Why are power supplies important for information and communication devices?

Power supplies for information and communication devices are important devices for providing stable power supply 24 hours a day, 365 days a year for the various communication devices used to provide data communication services, such as telephone and Internet.

What types of power systems are used in communications infrastructure equipment?

Communications infrastructure equipment employs a variety of power system components. Power factor corrected (PFC) AC/DC power supplies with load sharing and redundancy (N+1) at the front-end feed dense, high efficiency DC/DC modules and point-of-load converters on the back-end.

What is a power supply device?

The devices provide direct access to a large range of highly informative data-sets that help to monitor, analyse and optimise the complete power supply concept of any machinery – from the quality of the power grid, to the AC input and the DC output as well as the DC distribution.

Why should I use smart power supplies?

Please feel free to contact our application consultants. Smart power supplies can immediately provide alerts or error messages in case of critical power supply scenarios such as phase failures or transients on the AC-side. This is especially interesting for systems affected by bad AC grid conditions.
