# Price changes of solar panels

## Overview

---

How have solar panels cost and efficiency changed over time?

Let's take a look at how solar panel cost and efficiency have changed over time. Solar panels are about 60% cheaper and 40% more efficient than they were in 2010. Solar panels in 2010 cost about \$8.70 per watt and were about 15% efficient. Today, solar panels cost about \$3.00 per watt on average and are between 19% and 22% efficient.

How will global solar prices change in 2025?

The continued fall in production costs is expected to push global average solar prices down by 5-10% in 2025, making solar adoption more accessible in developing markets. 2. Increased Adoption of Ground-Mount Systems Ground-mounted solar panels were once considered expensive compared to roof mounts, but that gap is narrowing.

How much do solar panels cost in 2024?

By 2010, prices had dropped to approximately \$7.50 per watt, and since then, the decline has been even steeper. In 2024, the average cost of solar panels is around \$1 per watt, a monumental reduction that has revolutionized the solar industry. The primary factors contributing to this decline in cost include:.

How much do solar panels cost?

Data from the National Renewable Energy Laboratory (NREL) documented that residential solar panel installations cost about \$8.70 per watt in 2010, meaning the average 6 kilowatt (kW) solar installation in 2010 cost about \$52,200 before any incentives.
